The screenshot shows a web application titled "DBMS Login Page" with a red background. On the left, there is a sidebar menu with a list of databases: **databases**, cars, cars_1, information, mysql, performance, sakila, sys, and world. The **databases** item is highlighted. The main content area features a yellow heading "Welcome to Abhinav Database". Below the heading, there are login fields: "Username:" with the value "root", "Password:" with the value "Anu@1210", and "Database:" with the value "sakila". A "Login" button is positioned below these fields. Under the heading "Pre-defined queries:", there are four buttons: "databases", "first name and last name of actor", "Actor Name", and "left join address". Below these, there are two more buttons: "No of copies of Hunchback Impossible" and "movies starting with the letters K and Q". Under the heading "Queries based on user requirement :", there is a text input field labeled "enter the query:" and a button labeled "input".

When I push the queries the results are displayed
